

Reviewer 1 v.1

Comments to the Author

The authors have discussed the role of gut microbiota in COVID-19. It is an interesting idea and undoubtedly gut microbiota plays key role in regulation of different physiological activities. This letter can be accepted after addressing the following revisions.

Comments

1. Page 1, Line 25-29 should be updated
2. Some evidences are lacking citations, such as Page 1, line 53-60 and page 2, line 3-6.
3. How Commensal bacterial species are important in COVID-19 pathogenesis? Is there any evidence or possibility?
4. Authors have focused on lung injuries associated with COVID-19 infection? Does it mean that only lung health is responsible for the mortality in individuals infected with COVID-19?
5. This letter could further be benefited from including a precise dietary plan that could help the COVID-19 patients.
